Art Unit: 2815

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Claims 33-39, 44, 45, 46-48, 51-57, 62-66, 69-70 are rejected under 35 U.S.C. 102(e) as being anticipated by Tsai et al.

Tsai et al shows a first metal pad structure comprising a first interconnect metal 41 and first via pad structure 42 comprising a plurality of segments of a first via metal 423 and a first plurality of dielectric fillers 421. Said first metal may be formed of aluminum and the first metal via may be formed of tungsten. A second metal pad structure 42 comprising a plurality of via metal and dielectric is shown formed under said first. At least two of said plurality of segments of said first via metal are shown connected by way of said first interconnect metal 41 which is formed thereon.

The steps of "fabricating" recited I the claims are deemed to be inherently taught by Tsai et al.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2815

Claims 40-43, 49, 50, 58-61, 67-68, 71 and 72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsai et al

Tsai et al teaches the features of the invention as discusses above except for use of a low-k dielectric. The failure of Tsai to limit the teachings of his invention to any one particular dielectric is deemed to suggests use of any conventional dielectric well known in this are such as those recited in the claims.

Claims 33-72 are rejected.

Applicants arguments filed 9-3-2002 have been considered but are deemed to moot in light of the new rejection rendered in this office action. The pad structures of the instant invention shown in for example figures 3 and 4 show very distinguishing structure that fails to be recited as such in the claims. The broad recitation of the via pad structure recited in the claims continues to be considered well known as shown by the prior art references relied upon the rejection and those not used in a rejection but applicable such as Chittipeddi et al, Tanaka and Buynoski. It is suggested that the applicant consider revising the claims to recite more specifically the via pad structure of his invention such that it distinguishes from those pads referenced.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2815

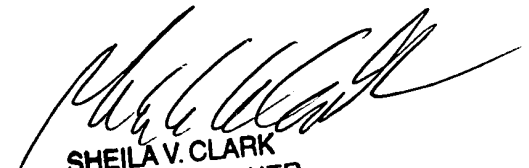

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
